

# KEEP IT CLEAN

## WASTE DISPOSAL

### ANTIMICROBIAL CAN LINERS Add A Layer Of Protection

Inhibit the growth of bacteria on the bag. ALUF Plastics' antimicrobial additive is engineered into the molecular structure of the liner providing an added layer of protection that inhibits the growth of bacteria on the bag.

These samples were tested for efficacy against bacteria. The left sample was manufactured with our antimicrobial additive, the sample on the right was not. Both samples were inoculated with bacteria and then photographed after 24 hours. The sample with antimicrobial protection shows no growth while the unprotected sample shows significant contamination.

### STEP-ON CANS Hands Free Disposal

Continental's 12 and 18-Gallon Step-On Receptacles allow for convenient and hygienic disposal of waste. Step pedal provides hands-free use. Lids close securely to base, keeping odors contained. Metal-free and certified fire resistant. Can be used with standard poly liners.

Perfect for:

- Doctor's Office
- Dental Practice
- Assisted Living
- Urgent Care
- Day Care

and more

Available in White, Beige, and Red.  
18 Gal also available in Green

Antimicrobial product protection is not intended to control disease pathogens. Regarding the effectiveness of our built-in antimicrobial technologies against coronavirus COVID-19, Our antimicrobial product protection works to minimize microbial growth on the surface of our products, they are not currently proven to have any antiviral properties.
